

Book Vote

An Interactive Digital Platform for Literary Trends and Community
Insights

Student Project | Omarov Amir IT2-2502 CHS

Project Goal

To bridge the gap between traditional reading and modern digital interactions by providing a seamless, real-time polling system for literary enthusiasts.

| TECH STACK

Backend

Powered by Python 3.13 and Flask, ensuring robust server-side logic and efficient request handling.

Frontend

Built with HTML5, CSS3, and Jinja2 templates for a responsive, modern Dark Mode interface.

Storage

Utilizes a lightweight JSON-based persistent database for reliable, real-time data tracking.

ARCHITECTURE

Logical Flow

The application follows a clean separation of concerns, isolating data management from presentation logic.

 templates/ -> UI
 app.py -> Server & Classes
 vote.json -> DB Storage

 .vscode	21/05/2026 12:51 PM	File folder
 templates	21/05/2026 12:51 PM	File folder
 app.py	21/05/2026 6:07 PM	Python File
 README.md	21/05/2026 6:07 PM	Исходный файл ...
 requirements.txt	21/05/2026 3:21 PM	Text Document
 vote.json	21/05/2026 6:06 PM	Исходный файл J...
 голосования.py	1/05/2026 10:54 PM	Python File

USER INTERFACE

Modern Aesthetics

The interface features a professional "Dark Mode" palette designed for readability and visual comfort.

Interactive cards provide immediate feedback, allowing users to visualize current polling trends through dynamic vote counters and hover effects.

| CORE FUNCTIONS

Real-time Polling: Instant vote counting and UI updates via Flask-based dynamic routing.

Persistent Storage: All data is safely stored in JSON, ensuring results remain available after restart.

Data Management: Includes an administrative reset function to clear the database with a single click.

Hybrid Access: Features both a modern Web interface and a legacy Terminal-based CLI mode.

Q&A
